Economy of Effort

“The willingness to focus at the decisive place and time necessitates strict economy and the acceptance of risk elsewhere and at other times.

To devote means to unnecessary efforts or excessive means to necessary secondary efforts violates the principle of focus and is counterproductive to the true objective.

Focus applies not only to the conduct of war but also to the preparation for war.”

The Marine Corps is a combat force -- not a business. To be successful, however, we need to support warfighting excellence with well-managed business processes that are both effective and efficient.
